The new GEN-II Tactical U94 PTT was designed as a cost effective solution for today's advanced radios that operate from VHF to the GHz frequency range.

The GEN-II Tactical U94 was originally designed as a dual channel platform, but can be easily expanded to accommodate additional accessories such as secondary radios, ground, and airborne ICS systems.

The GEN-II Tactical U94 incorporates a unique junction box that accommodates additional accessories such as KDU/EUD and USB cables.

It also incorporates an exclusive charging circuit designed for an EUD or other similar device.
